

## ENVIRO-ALERT!

### RECENT HEAVY SNOW AND PRECIPITATION HAVE RAISED WATER LEVELS IN STORMWATER MANAGEMENT SYSTEMS

#### Dear Valued Client!

The recent heavy snow and precipitation have raised water levels in stormwater management systems. Snow and ice can further increase drainage problems by blocking pipes and outfall structures. Envirotech Environmental Consulting, Inc. (EECI) inspects all infall and outfall structures during our normal maintenance visits. If, however, a drainage problem or structural deficiency is observed, please contact EECI immediately. EECI provides 24 hour emergency response, and will provide the corrective action(s) or recommend the proper solution to drainage or structural issues.

If you have any questions, concerns, or would like to report drainage or other stormwater issues, please contact EECI during normal business hours (Monday - Friday 8:00 AM- 4:00 PM) at 302.645.6491 or at [info@envirotechcinc.com](mailto:info@envirotechcinc.com). For an afterhours emergency please contact EECI's Director of Operation, Wesley Allen, at 302.462.5615.
