## CLP Alert! Landscaping Spray Issue

If your community or property has a Conservation Landscaping Plan (CLP) with wildflower plantings in the pond buffers and conservation areas, adjacent to turf, please be aware that landscaping companies should not apply turf herbicide or turf management products within 15 feet of all buffers or conservation areas. We are seeing many instances where over-spray of turf products are killing wildflower plantings, specifically where the turf areas adjoin with buffers and conservation areas. Please alert your designated landscapers.

If you have any questions or concerns, please contact EECL's professional office at 302.684.5201 or via email at [info@envirotechcinc.com](mailto:info@envirotechcinc.com)!
