Let's talk about Ants

This is to advise our customers that ant infestations can cause aerator control panels to fail, thus causing the aerator(s) to stop working. In that regard, please be advised that Envirotech Environmental Consulting, Inc. (EECI) is spraying for ants during its normal visits to avoid infiltration by ants.

Community Homeowners' Associations and property managers may also assist in this process by requiring insect pesticide applicators to spray for ants around the bases of all aeration control panels and compressor units.

If you have any questions or concerns, please contact EECI's professional office at 302.684.5201 or via email at info@envirotechcinc.com!
