

Grass Clippings

Community Property Managers, please notify landscapers and turf management divisions that no grass clippings get placed into ponds. When grass enters the pond it creates hay infusion. Hay infusion occurs when heavy loads of grass clippings enter the isolated water columns and will cause algae blooms.

If you have any questions or concerns, please contact EECI's professional office at 302.684.5201 or via email at info@envirotechcinc.com!
