

Don't Inherit Capital Expenses! Conduct a CCR Review

Recognize the problem before the problem is large scale! The State of Delaware requires sediment and erosion compliance on stormwater management systems within subdivisions, municipalities, and industrial facility sites. Envirotech Environmental Consulting, Inc. (EECI) possesses a team of Certified Construction Reviewers (CCR) qualified to assess stormwater management systems for pro-active deficiency recognition and corrective actions recommendations.

A "Certified Construction Reviewer" (CCR) is a state of Delaware sediment and stormwater management certified reviewer of stormwater systems pre, during, and post-construction.

EECI has a full staff of Certified Construction Reviewers ready to meet the State of Delaware sediment and erosion due diligence required during construction and post build out monitoring, maintenance, and deficiency corrective actions. On-site assessments are conducted holistically in conjunction with approved with stormwater and sediment control erosion plans. Observed deficiencies are recorded, photo documented, and submitted in an official certified construction review report.

To schedule a complimentary and collaborative meeting regarding a comprehensive assessment of your community's stormwater system, please contact our Lead Certified Construction Reviewer at (302) 462-5613.
