Bush Hogging Services

The winter months are the best time to cut down dormant and woody stemmed vegetation to an adequate height, as per Best Management Practices (BMP), for vegetation control in and around community common ground areas.

Our bush hogging services are applicable to:

- ➡ Pond Riparian Buffer Zones
- ➡ Forest Fringes
- ➡ Wetland Fringes
- ➡ Community Meadow Management Areas

To retain our Bush Hogging services for a dormant season pruning, call Envirotech at 302.684.5201 or email us at sales@envirotechcinc.com for a cost per acre quote.
