Envirotech provided educational outreach for Earth Day

Envirotech Environmental Consulting Inc. partnered with Delaware State University on Earth Day to provide educational outreach pertaining to the most precious natural resource, water. Surface water monitoring and assessment may be conducted using bio-monitoring practices with aquatic macro invertebrates serving as the indicators of water-quality status. Envirotech's interactive station served as a mobile laboratory for inquiry-based learning activities including Energy Flow Through the Aquatic Ecosystem Within Food Webs and Assessing Water Quality with Rapid Bio Assessments.

Envirotech offers educational outreach programs designed by a certified State of Delaware

educator to address all learning styles appropriate for the occasion. The programs can be tailored to a variety of ages and education levels.

Homeowner associations, municipal governments, school districts, property management companies and higher learning institutes can take advantage of these educational programs for a state-of-the-art learning experience.

Envirotech's mission is to provide comprehensive environmental management services for achieving environmentally sound and aesthetically pleasing results that meet environmental regulatory policy and ecological needs. Learn more about Envirotech and environmental products at www.envirotechecinc.com.
